# The Harris Poll 

Harris Insights \& Analytics LLC, A Stagwell Company

## 2020 Consumer Financial Literacy Survey

Prepared For:

NFCC

March 23, 2020

## Survey Methodology

The 2020 Financial Literacy Survey was conducted online within the United States by Harris Poll on behalf of the NFCC (National Foundation for Credit Counseling) and Discover between March $9^{\text {th }}$ and March $13^{\text {th }}, 2020$ among 2,004 U.S. adults ages $18+$. Figures for age, sex, race/ethnicity, education, region and household income were weighted where necessary to bring them into line with their actual proportions in the population. Propensity score weighting was used to adjust for respondents' propensity to be online. Prior to 2013, this survey was conducted by telephone.

All sample surveys and polls, whether or not they use probability sampling, are subject to multiple sources of error which are most often not possible to quantify or estimate, including sampling error, coverage error, error associated with nonresponse, error associated with question wording and response options, and post survey weighting and adjustments. Therefore, The Harris Poll avoids the words "margin of error" as they are misleading. All that can be calculated are different possible sampling errors with different probabilities for pure, unweighted, random samples with $100 \%$ response rates. These are only theoretical because no published polls come close to this ideal.

Respondents for this survey were selected from among those who have agreed to participate in an online research panel. The data have been weighted to reflect the composition of the adult population. Because the sample is based on those who agreed to participate in an online research panel, no estimates of theoretical sampling error can be calculated.

## Significance Testing

When results from sub-groups of a sample appear in the detailed tabulations, an indicator of statistically significant differences is added to the tables run on our standard demographic banners. Significance testing is done to the $95 \%$ confidence level, and the test is performed on percentages as well as mean values. Each sub-sample is assigned a letter. When the percentage of one sub-sample is significantly different from the percentage of another sub-sample, the letter representing one of the two samples appears next to the percentage (or mean) of the other sample.

For instance, the percentage of males answering yes to a particular question may be compared to the percentage of females answering yes to the same question. In the example below, the male sample is assigned the letter B, and the female sample is assigned the letter C . Here, respondents were asked whether a certain business practice is acceptable. $67 \%$ of women said that it was - a proportion significantly greater than the $57 \%$ of males who believe that the practice is acceptable. To indicate that women are significantly more likely than men to find the practice acceptable, the letter B-the letter assigned to the male sub-sample appears next to the " $67 \%$ " in the female column. Similarly, the $37 \%$ of men that find the practice unacceptable is significantly greater than the $29 \%$ of women who do so and, therefore, the letter C - the letter assigned to the female sub-sample - appears next to the " $37 \%$ " in the male column.

|  |  | Sex |  |
| :--- | :---: | :---: | :---: |
|  | Total | Male | Female |
|  | $\mathbf{( A )}$ | $\mathbf{( B )}$ | $\mathbf{( C )}$ |
| Unweighted Base | 977 | 488 | 489 |
| Weighted Base | 967 | 464 | 503 |
| Acceptable | 611 | 274 | 337 |
|  | $63 \%$ | $57 \%$ | $67 \% \mathbf{B}$ |
| Not Acceptable | 319 | 171 | 148 |
|  | $33 \%$ | $37 \% \mathbf{C}$ | $29 \%$ |
| Don't Know | 37 | 18 | 19 |
|  | $4 \%$ | $4 \%$ | $4 \%$ |

## Key Findings

## Budget, Spending, and Saving

In 2020, nearly half of U.S. adults (47\%) say they have a budget and keep close track of how much they spend on such things as food, housing, and entertainment.

- Over half of U.S. adults ( $52 \%$ ) are spending the same as last year, while more than one-quarter are now spending more ( $27 \%$ ) and fewer ( $22 \%$ ) say they are spending less than before.
- Younger adults ages 18-34 are more likely than those ages 35+ to be spending more this year (41\% ages 18-34 vs. $25 \%$ ages $35-44,21 \%$ ages $45-54,18 \%$ ages 55-64, and $19 \%$ ages 65+).
- Roughly the same proportion (51\%) say they are saving the same as last year, while the proportion who say they are saving more (32\%) greatly exceeds those who are saving less (18\%).

Seven in 10 U.S. adults ( $70 \%$ ) have non-retirement savings, a proportion that has held mostly consistent since 2016 , with the majority of adults ( $63 \%$ ) saving or investing their money in a savings account.

- Men $(80 \%)$ are more likely than women ( $61 \%$ ) to have non-retirement savings.
- Men are also more likely than women to have savings/investments overall ( $89 \%$ vs. $76 \%$ ), and among those who have any savings/investments:
- Men are more likely than women to save/invest their money in a 401 k plan, IRA, or other investments/mutual funds ( $74 \% \mathrm{vs} .60 \%$ ).
- Adults ages 65+ are more likely than those ages 18-64 to use a savings account (89\% ages 65+ vs. 73\% ages 18-34, 70\% ages 35-44, 76\% ages $45-54$, and $74 \%$ ages 55-64).

Further, the majority of U.S. adults (88\%) are at least somewhat confident in their ability to meet their future financial obligations, with nearly half (46\%) saying they are extremely or very confident.

- Men are more likely than women to say they are extremely or very confident (53\% vs. $40 \%$ ).

## Retirement

When it comes to retirement savings, 7 in 10 U.S. adults (70\%) say they save some portion of their household's annual income for retirement, which is significantly higher than previous years. Further, more than one in ten (11\%) now say they save more than $20 \%$ of their household's income every year for retirement, a proportion that has risen slightly each year since 2017 ( $10 \%$ in 2019, $8 \%$ in 2018, and $7 \%$ in 2017).

- Men are more likely than women to be saving for retirement ( $81 \%$ vs. $61 \%$ ).

Perhaps unsurprisingly since U.S. adults are more likely to be saving at least something for retirement in 2020, they are also more likely to feel confident they are saving enough for retirement. Over half (56\%) say they feel very or somewhat confident that they are saving enough.

- More than 1 in 5 U.S. adults ( $22 \%$ ) feel very confident - but a similar proportion ( $23 \%$ ) are not confident at all that they are saving enough.
- Men are more likely than women to feel confident in their retirement savings ( $63 \% \mathrm{vs} .50 \%$ ).

Yet, when asked what areas of personal finance worry them most, the top response among U.S. adults continues to be retiring without having enough money set aside (13\%), followed closely by insufficient "rainy day" savings (12\%). Notably, while these are the most common responses year over year, the proportions are at low points following highs of $18 \%$ and $16 \%$, respectively, in 2017.

## Key Findings (continued)

Homeownership
Considering the current housing market, over half of U.S. adults ( $57 \%$ ) feel buying is more affordable, while one-quarter ( $25 \%$ ) believe renting is more affordable and another $18 \%$ are not at all sure. While the proportion of those saying renting is more affordable has held mostly consistent from 2019 ( $26 \%$ ), more U.S. adults say buying is more affordable in 2020 (compared to $50 \%$ in 2019) while those who are not at all sure has gone down (compared to $24 \%$ in 2019).

- Men are more likely than women to say buying is more affordable ( $62 \%$ vs. $53 \%$ ).
- Adults with household income over $\$ 50 \mathrm{~K}$ are more likely than those with household income less than $\$ 50 \mathrm{~K}$ to feel buying is more affordable ( $56 \%$ with household income $\$ 50 \mathrm{~K}-\$ 74.9 \mathrm{~K}, 64 \%$ with household income $\$ 75 \mathrm{~K}-\$ 99.9 \mathrm{~K}$, and $74 \%$ with household income $\$ 100 \mathrm{~K}+\mathrm{vs}$. $38 \%$ with household income less than $\$ 50 \mathrm{~K}$ ).

Most U.S. adults (82\%) have tried to purchase their own home, and of those, more than half (56\%) have faced barriers.

- Hispanic adults are the most likely to have faced barriers to homeownership as compared to their Black/African-American and White counterparts ( $68 \%$ vs. $47 \%$ and $43 \%$, respectively).
- Black/African-American and Hispanic adults are 2-3 times more likely than White adults to have encountered housing discrimination ( $10 \%$ and $8 \%$ vs. $3 \%$, respectively).
- Younger adults ages $18-34$ who have tried to purchase their own home are most likely to have experienced barriers, particularly little or no credit history and lack of understanding of the homebuying process.
- Adults who have tried to purchase their own home residing in the Northeast are the least likely to have faced barriers to doing so ( $41 \%$ ).

## Key Findings (continued)

Credit Card Debt, Minimizing Debt, and Financial Problems Related to Debt
A majority of U.S. adults (62\%) have had credit card debt in the past 12 months, and of those, more than 2 in 5 ( $46 \%$ ) have attempted to find a lower interest rate.

- Adults ages 18-44 are more likely to have attempted to reduce their interest rate ( $46 \%$ ages 18-34 and $36 \%$ ages $35-44 \mathrm{vs}$. $23 \%$ ages $45-54$, $15 \%$ ages $55-64$, and $13 \%$ ages $65+$ ).
- Further, younger adults ages 18-34 are around twice as likely as their older counterparts to have written a letter or email to a creditor to negotiate a lower rate ( $13 \%$ ages $18-34$ vs. $7 \%$ ages $35-44,5 \%$ ages $45-54,1 \%$ ages $55-64$, and * ages $65+$ ).

Of the one-third of adults who have not done anything to attempt to obtain a lower interest rate for their credit card debt in the past year (33\%), the top reasons for not taking action are that they are satisfied with their current rates (33\%) or they never thought of it (26\%).

- Men are more likely than women to be satisfied with their current rates (39\% vs. $26 \%$ ).

While over 2 in 3 U.S. adults (69\%) pay all their bills on time and have no debts in collection, this proportion is significantly lower than it has been over the past 4 years $(72 \%$ in $2019,72 \%$ in $2018,75 \%$ in 2017 , and $74 \%$ in 2016). Thus, more than one in four ( $27 \%$ ) admit they do not pay their bills on time, the highest proportion since 33\% said the same in 2012.

Only $16 \%$ of all U.S. adults say they have never had any debt, and of the $84 \%$ of U.S. adults who have ever had debt:

- Nearly 7 in $10(69 \%)$ find it difficult to minimize their debt, primarily due to unexpected financial emergencies (23\%) or reduction of income (23\%).
- Parents of children under the age of 18 are more likely to find it difficult to minimize their debt ( $80 \% \mathrm{vs} .63 \%$ ).

If they were behind on their debt, U.S. adults would most commonly prefer to be contacted by the debtor via email (29\%) or phone call ( $22 \%$ ), and more than half ( $52 \%$ ) would prefer this communication to occur on a workday. Looking for payment programs or arrangements to settle the debt, around one-third say a monthly payment plan they can design themselves (33\%) or a yearly payment plan (32\%) would be the most helpful.

Further, if they were having financial problems related to debt, most U.S. adults (81\%) would reach out for help, most commonly turning to friends and family first (23\%). Only $8 \%$ say they would first turn to a professional non-profit credit counseling agency.

When asked why they would not reach out to a professional non-profit credit counseling agency for help if they were having financial problems related to debt, about one in six U.S. adults (16\%) say they can resolve their own problems without outside help.

- Notably, 1 in $4(25 \%)$, or over 62 million Americans ${ }^{1}$, report they would reach out to a professional non-profit credit counseling agency for help.

[^0]
## Key Findings (continued)

Knowledge of, and Confidence in, Personal Finance
Over half of U.S. adults (57\%) continue to give themselves a grade of A or B on their knowledge of personal finance, and nearly 9 in 10 ( $87 \%$ ) say they were very or somewhat confident that they made the right choice during their last big financial decision (such as picking a credit card, buying a car, or refinancing their mortgage). At the same time, however, over 1 in 10 (13\%) admit they are not very or not at all confident, which has been rising slightly each year since 2017 ( $12 \%$ in 2019, $10 \%$ in 2018, and $8 \%$ in 2017).

- Adults ages $65+$ are more likely than younger adults to feel confident in their last big financial decision (95\% ages 65+ vs. 89\% ages $55-64,87 \%$ ages $45-$ $54,83 \%$ ages $35-44$, and $84 \%$ ages $18-34$ ).

Over 3 in 4 ( $78 \%$ ) agree - including nearly 3 in $10(29 \%)$ who strongly agree - that they could still benefit from advice and answers to everyday financial questions from a professional considering what they already know.

When asked who they would turn to for general financial/money management guidance, the top response remains a financial professional such as a CPA or financial planner (36\%), followed closely by friends and family (31\%).

- Compared to previous years, fewer U.S. adults would turn to a bank or credit union ( $22 \%$ in 2020 vs. $25 \%$ in 2019 , $25 \%$ in 2018 , and $32 \%$ in 2017 ).

## Small Business Financing

If they were looking to start a new business and needed money to finance it, key actions of U.S. adults are as follows:

- Nearly 3 in 10 ( $27 \%$ ) would seek a business loan through a national (12\%) or community ( $11 \%$ ) bank, credit union ( $9 \%$ ), or online-only lender ( $6 \%$ ).
- Over 1 in 5 (22\%) would rely on personal funds (18\%) or liquidate personal assets (8\%).
- Only $12 \%$ would seek an SBA-backed loan and $10 \%$ would apply for a public or private grant.

Adults ages 18-34 are more likely than their older counterparts to say they would borrow money from friends/family/business partners (19\%), borrow money from a community development lender (13\%), or take out a short-term payday loan (7\%).

One in 3 U.S. adults (33\%) - particularly women (39\% vs. 26\% of men) and adults ages 45+ (39\% ages 45-54, 41\% ages 55-64, and 39\% ages 65+ vs. 22\% ages 18-34 and $27 \%$ ages 35-44) - are not at all sure how they would come up with the money if they were looking to finance a new business.
